

DocuCrease

Channel Scorer

- *Simple, innovative design*
- *Ideal for glossy covers & digital prints*
- *Two models for scores up to 20.5" in length*

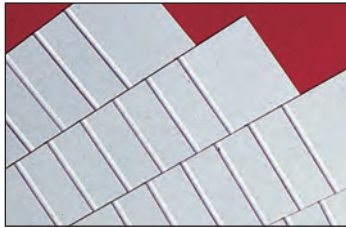

Achieving crack-free scoring of stocks printed from digital color and black and white printing systems is no longer an issue with the Standard Morgana DocuCrease®. Easy to use, the economical DocuCrease is ideal for any environment looking for a short-run creasing solution to complement its digital printing systems.

DocuCrease

The desktop Standard Morgana DocuCrease® Channel Scorer provides a fast, easy way to channel score covers, cards and even laminated material without cracking.

Ground-breaking Design

Unlike rotary scorers that can leave a cracked finish on some stocks, the channel score produced by the DocuCrease provides a clean, sharp score that doesn't damage the printed image. That's because the creasing action is achieved by embedding the fibers — across the length of the document — between a dye and an anvil...all in one action into the stock surface. The result is a superb crease without damage.

Simple Operation

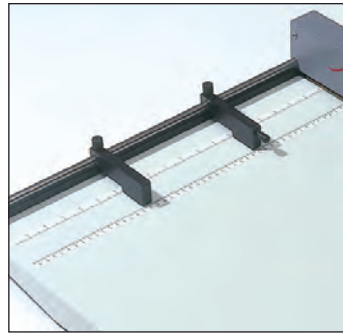

The DocuCrease contains a clearly marked table with an indicator scale for easy and accurate positioning of the creases. Two adjustable backstops allow for two creases in one pass on the same piece, or for easy set-up of multiple creasing jobs. And it is "ergonomically correct", making it easy to use for either right or left handed operation.

The DocuCrease is great for adding creases to:

- Glossy cover stocks with the grain going in the wrong direction
- Ink or toner-based stocks
- Pamphlets/brochures
- Greeting cards
- Covers used for booklets or perfect bound books

Versatile

Available in two models, the DocuCrease channel scores up to 14" in length on the smaller unit, the DC35, and up to 20.5" in length on the larger unit, the DC52. Both models are ideal for a wide assortment of printed materials. Additional backstops can be added to either unit to increase the number of preset crease positions per pass that you can get from using the two standard backstops.

Adjustable Backstops

Two standard adjustable stops allow for two preset creases in one pass. And they couldn't be easier to adjust: just lift and slide along measured table.

AutoCreaser

For higher-volume creasing, step up to the Standard Morgan AutoCreaser, a fully automated suction feed scorer.

Specifications

	Model DC35	Model DC52
Process:	Manual lever press	Manual lever press
Maximum Sheet Width:	14"	20.5"
Maximum Paper Weight*:	Up to 12 pt. cover	Up to 12 pt. cover
